                        with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorders, or disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying indiverse from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germ
                                                                                                                                                                                                                                The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New diagnostic and therapeutic polynucleotides and polypeptides, use in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therap
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gene therapy. The present sequence represents a dithp protein invention. Note: The sequence data for this patent is not represent printed specification, but was obtained in electronic form from WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                      The invention relates to novel human metal binding proteins (MBP) and CC encoding polynucleotides. The MBPs can be expressed by standard recombinant methodology. The polypeptides and polynucleotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of MBP, such as cell CC proliferative (e.g. cancer, atherosclerosis), neurological (e.g. Cancer), disease, stroke), immune/inflammatory (e.g. AIDS, CC epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, CC disorders, or infections. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of MBP. The MBP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. An microarray comprising different nucleotide molecules affixed at distinct polysical locations on a solid substrate, where at least one nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human metal binding proteins (MBP), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant MBP expression e.g. cancer, AIDS, epilepsy, or infections.
                                   molecule comprises a first oligonucleotide or polynucleotide sequence specifically hybridizable with at least 30 contiguous nucleotides of the target polynucleotide is useful in monitoring or measuring protein-protein interactions, drug-target interactions, and gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Jiang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             anticonvulsant; nootropic; neuroprotective; cerebroprotective; anti-HIV; antiallergic; antiinflammatory; thyromimetic; transgenic; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S X
                     The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC autoimmune/inflammatory disorders, developmental disorders, or confections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the convention. Note: The sequence data for this patent is not represented in the princed specification, but was obtained in electronic format directly CC from WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                  The invention relates to novel diagnostic and therapeutic polynucleotides consisted from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorder, gastrointestinal disorder, or disorder, neurological disorder, gastrointestinal disorders, or disorder, neurological disordereria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obscinced in electronic format directly from which are the printed specification, but was obscinced in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5
                                                                                  The sequence represents an angiotensin converting enzyme splice variant CC (ACEV) polypeptide. The polypeptides of the invention include variants of CC granulocyte colony stimulating factor receptor, glucagon, interleukin 6, CC platelet-derived endothelial cell growth factor, cyclin-dependent kinase cinhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal CC polypeptide receptor 2. The polypeptides and their associated nucleic condidate compounds capable of binding the molecules. The sequences of CC the invention can be used in the treatment and diagnosis of various cisorders including cardiovascular diseases such as arteriosclerosis, CC myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, concern, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                            The invention relates to novel diagnostic and therapeutic polynucleotides content from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorder, endocrine disorder, neurological disorder, developmental disorder, endocrine disorder, neurological disorder, gastrointestinal disorder, endocrine disorders, or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, CC platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P3, and vasoactive intestinal colonypeptide receptor 2. The polypeptides and their associated nucleic colds are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various clisorders including cardiovascular diseases such as arteriosclerosis, compocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbetosis and vascular pathologies involving an endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The present sequence is the protein sequence of human transferrin (Tf), CC minus the signal peptide. The invention relates to modified Tf fusion CC proteins comprising at least one therapeutic protein, polypeptide or CC peptide, in which the Tf portion is engineered to extend the serum half clife or bloavailability of the molecule. The modified Tf fusion protein CC preferably comprises a human Tf moiety that has been modified to reduce CC or prevent glycosylation, iron binding and/or transferrin receptor CC binding, having at least one amino acid substitution, deletion or CC addition in the hinge region, or at residues Asp-63, Gly-65, Tyr-95, Tyr-CC 188, Lys-206, His-207, His-249, Asp-392, Tyr-426, Tyr-514, Tyr-517, His-CC (all claimed). Nucleic acids encoding such fusion proteins, vectors, host CC cells and transgenic animals which produce the fusion protein is useful for transfering a disease cyanitom or far Asilvarina a theraparitic CC treating a disease or disease examine or far Asilvarina a theraparitic
                                                    treating a disease or disease symptom, or for delivering a therapeutic agent complexed to the ferric iron of transferrin to the inside of a cell or across the blood-brain barrier. The modified fusion protein, or a nucleic acid encoding it, can be used in the diagnosis, prognosis, prevention and/or treatment of diseases and/or disorders of the endocrine, nervous, immune, respiratory, cardiovascular, reproductive and digestive systems, diseases and/or disorders relating to the blood or to cell proliferation, inflammatory conditions, and to treat viral, fungal, the latest of the systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New fusion protein, useful in the diagnosis and treatment of diseases disorders relating to the respiratory, cardiovascular and digestive systems, comprises a transferrin protein fused to a therapeutic protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 280-281; 298pp; English

The invention may be useful for the development of compounds with cytostatic, antibacterial, virucide, antiparasitic, immunosuppressive or antiarthritic activity. In addition, the sequences disclosed may be useful for gene therapy. The fusion protein is useful for preparing a composition for treating a disease or disease symptom in a patient for example septic shock, endotoxic shock, cachexia syndromes associated with bacterial, viral or parasitic infections, neoplasm, autoimmune disease, arthritis or adverse effects associated with treatment for preventing graft rejection. The present sequence is that of the mature human transferrin protein which is related

transferrin precursor - rat

N;Alternate names: lung-derived growth factor; siderophilin

C;Species: Rattus norvegicus (Norway rat)

C;Date: 16-Fab-1995 #sequence revision 12-May-1995 #text_change 09-Jul-2004

C;Accession: S49163; S54980; A30014; A14679; A53289; A30512; I52203

R;Escriva, H.; Pierce, A.; Coddeville, B.; Gonzalez, F.; Benaissa, M.; Leger, D.; Wierus submitted to the EMBL Data Library, January 1994

A;Description: Rat mammary gland transferrin: glycan structure, nucleotide sequence and A;Reference number: S49163

A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-695 < ESC>
A;Cross-references: UNIPROT:P12346; UNIPROT:Q63602; UNIPARC:UPI0000167A8E; EMBL:X77158;

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.

-i- SUBUNIT: Monomer.
-i- SUBCILULAR LOCATION: Secreted protein.
-i- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.
-i- MISCELLANEOUS: The peptidase S60 domains do not have protease function as the catalytic residues are missing.
-i- SIMILARITY: Belongs to the transferrin family.
-i- SIMILARITY: Contains 2 peptidase S60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Copyrighted Distributed

                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBUNIT: Monomer.

SUBCELLULAR LOCATION: Secreted protein.

TISSUE SPECIFICITY: Expressed by the liver and E
TISSUE SPECIFICITY: Expressed by the liver and E
MISCELLANEOUS: The peptidase S60 domains do not
function as the catalytic residues are missing.

SIMILARITY: Belongs to the transferrin family.

SIMILARITY: Contains 2 peptidase S60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: Transferrins are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate. It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    392

It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.

-I- SUBCELLULAR LOCATION: Secreted protein.
-I- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.
-I- MISCELLANEOUS: The peptidase S60 domains do not have protease function as the catalytic residues are missing.
-I- SIMILARITY: Belongs to the transferrin family.
-I- SIMILARITY: Contains 2 peptidase S60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "The
